

Motion Sensor Solar Lamp

Instruction manual

Precautions:

- During the first use, please put the product in a place with sufficient sunlight for charging, you should only use it after charging several hours.
- When the product not be used for a long time, please put it in a place with sufficient sunlight too. The charging time is 1 day, this is for the benefit of the inner battery. Please do this once a month when you have no use for it.
- The charging time and charging efficiency of the solar panel may be affected by the weather and the installation position. Considering the conversion rate of solar power generation, if the product is used with good weather, it will gain higher charging efficiency and effectiveness.
- When there is sunlight or other lights, if the power switch is off, the LED lamp will not be on in the day or night.
- The solar lamp should be installed in the place with sufficient light to ensure the solar panel work efficiently. If so, the working hour of the solar lamp will be prolonged significantly.
- In order to get more power of the Sun, the angle of the solar lamp and the direction of the light should be adjusted to the best position.
- During winter time or sunshine short time, it is suggested to use the solar lamp under mode 1.

Specification:

Name of product	Motion Sensor Solar Lamp
Model	ZJ-SL98
Output	5.5V, 1W
Battery capacity	2200mAh
Angle of the sensor	120 degrees
Induction distance	3-5 meters
Brightness	1000LM
Quantity of LED	98LED

1

Use Method:

- For charging the built-in battery, please set lamp in the place with direct sunlight.
- The strong sunlight can be converted into solar energy in a more effective way.
- Used in the place where the light is required, such as path, garage and backyard, etc. Within those areas, please put the lamp in the place where can be easily illuminated by the sunlight.

The mode can be set by cooperating with the usage scenario. Only one time setting is required, the light will be powered on automatically under that mode.

Long press for 1s to enter mode 1: Human body induction mode (the lamp will be on when people come, and the lamp will be off after the people have left for 15s)

Mode 2: Human body interaction + slight light mode (the lamp will be on when people come, the lamp will be slight after the people have left for 15s, and the lamp will be on again when people come)

Mode 3: Slight light mode (the lamp be slight light all the time no matter there's any person or not)

Using Method:

Press 2 seconds to open the switch.

Notes: If there's sunlight or other lights on the solar panel, the lamp will not be on even if the ON/OFF switch has been turned on. During testing, other object should be used to cover the solar panel, then the lamp will be on after turning on the ON/OFF switch.

2

Fix this lamp in a proper place with the screws in the package

①

it is recommended to install vertically against the wall 2-3m high above the ground as picture shown

you can try other ways to install it depending on your own surroundings but do not keep the solar panel upside down in any way, otherwise it will affect the efficiency of solar charging.
